

Capture OnTheGo[®]

OL[®] Software

Capture data in the field, automate processes in the office

Capture OnTheGo, a highly customizable data capturing solution

Capture OnTheGo is a mobile solution that allows remote workers to capture real-time data in the field. Improve the speed of your communications, automatically trigger processes and reduce scanning, manual paper processing, errors and lost documents.

This end-to-end solution is fully customizable and capable of receiving customer jobs that include customer data, photos, signatures, GPS coordinates and time stamps.

Customizable App

Use our powerful design tool to create advanced forms to run in the personalizable App. Use the template wizard and standard snippets as a starting point for creating more advanced forms to simplify data capture in the field.

Secure document sharing

Mobile friendly HTML forms that are ready for download are securely pulled to the App. Once downloaded, they remain in the user's library even when offline.

What's more, users and user groups can easily be managed so that they only have access to what they are entitled to, and what is relevant for them.

With Capture OnTheGo, documents can also be sorted and searched by client name or category.

Features

Mobile application

- Offline library
- PDF and image annotation
- User data can be validated online and offline

Wireless printing

Admin console

- Remote document management
- Manage users, user groups, documents and other parameters
- Custom banners can be used to brand the App

Workflow automation, to and from the App

- Windows 10, IOS and Android compatible

Capture and send data, including multimedia content

Online and offline modes

Process status icons

Offline capable

What happens when there's no Internet connection?

Forms can be filled in, validated and submitted even when offline. They will be queued until Internet access is available on your device and sent right away. Status icons let you know when they have been received.

Minimize bandwidth use

Because only new data needs to be sent back to your system, you save a lot of bandwidth and maximize the responsiveness of the App.

Multimedia content

Beyond user data, additional content can also be captured, such as signatures, pictures with annotations, handwritten content and geolocation coordinates.

Trigger internal processes

Thanks to its workflow automation feature, follow-up actions and processes, such as system updates (e.g.: CRM, ECM) or invoicing, can be triggered by submitting a form.

Capture OnTheGo.

NOW available as an all-inclusive subscription

Options are available, contact your sales rep for more information.

Typical Applications

- ✓ Proof of delivery
- ✓ Customer onboarding
- ✓ Inspection
- ✓ Field service management
