

About PlanetPress

For variable data printing and the automated improvement, management and distribution of your business documents.

PlanetPress is a professional software solution allowing organizations to maintain and grow their client base by adding value to business documents and distributing them in a format that best suits the recipient preferences.

Its ease of use, affordability and open architecture make it the perfect solution to quickly and easily enhance, produce and distribute business documents with relevant content that will be sure to capture the reader's attention and get the message across.

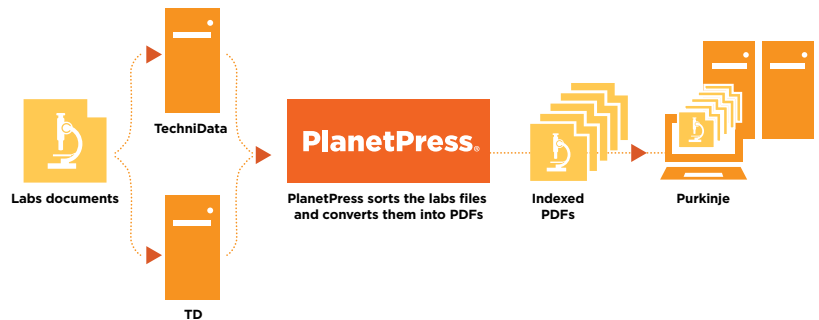

A Healthy Model of Efficiency

Today, CSSS medical records management is a model of automated efficiency, with intrusive manual steps eliminated. It all starts in labs:

- 1) Labs send results to Technidata and TD LIM software, which process data and produce reports for printing and send print files to PlanetPress.
- 2) PlanetPress automatically sorts them by patient and converts reports to PDF files.
- 3) PlanetPress creates an index file and organizes the documents in a directory.

Using the Purkinje electronic medical record system, users can quickly retrieve the PlanetPress-generated PDF reports.

PlanetPress Solution

"In addition to the original solution to manage record workflow, we also use PlanetPress to merge personal and social information into a PDF form," added Hubert. "We generate a barcode to identify the person and type of form for filing." This improves accuracy, while eliminating manual steps.

ROI in Less Than One Year

"Now we save approximately 15 hours a week in labor costs. The product paid for itself in less than a year."

In all areas of healthcare, Information professionals must find smarter ways to organize and manage hybrid streams of paper and digital medical data. By leveraging technology like PlanetPress, the CSSS ensures information quality, accuracy, accessibility and security for its patients' records.
